## INSTALLATION GUIDE

ambient room temperature range at 25°C  
 no noise and vibration low energy consumption

The installation of a minibar in a furniture cabinet must be made carefully ensuring proper air circulation through the cooling unit. The beside drawings depict a few examples of correct installations. The vents or grill openings must allow a minimum of 240cm<sup>2</sup> of free air flow. A minimum air space of up to 8-10 cm. between the cooling unit and the wall must be maintained. For more information about a proper installation of your HHI Minibars, please contact our sales team for a guidance.
